Customer: RELIANCE INDIA

Item Code: 036

Ticket Number: INC-146012

Comments: New Item Setup

Specification File: TRENDS_BACK_QC_TOOL 1.pdf

Canvas Size: 45.2 x 101.9 mm

System Output File: CLS_583848_A1C10.pdf

Canvas Size: 45.2 x 102.0 mm

Font Substitutions Applied

The following font substitutions were applied during analysis:

Output Font	→	Mapped to Spec Font
Arial,Bold	→	ArialNarrow-Bold

Quality Scores

Overall Position Score: 80.77%

Position Scores by Type:

- Text: 79.17%
- Barcode: 100.00%
- Image: 0.00%
- Vector: 39.35%

Pixel Density Score: 77.96%

Object Types Included in Analysis:

AI Analysis Results

Here's the analysis of the field comparison, highlighting discrepancies based on your criteria.

Overall Analysis:

The system-generated output (PDF B) shows significant deviations from the original specifications (PDF A) across almost all fields. The primary issues observed are:

Consistent Vertical Position Shift: All fields exhibit an upward shift in their Y-coordinate (y-start). The output y0 values are consistently lower than the specification y0 values. This indicates a general vertical offset issue in how the content is rendered on the output PDF, rather than individual field placement errors. The average shift is approximately 49-50 pixels upwards.

Font Mismatches:

Many text fields use ArialNarrow-Bold in the output where Arial-BoldMT was specified. These are different font families.

Field #1 uses RelianceLogos in the output instead of the specified Arial-BoldMT.

For fields #12 through #20, where ArialNarrow-Bold was specified, the output uses ArialNarrow,Bold. While these might refer to the same font family and weight, the exact string representation differs, which violates the "no variance" rule for font.

Style Mismatch: Field #1 has a style mismatch (Bold vs Regular).

Scaling Mismatch: Field #11 shows a difference in scaling (70 vs 60.6).

Barcode Content Mismatch: While not explicitly asked to compare text values, the "Text" parameter for barcodes often includes the decoded value. For barcodes, the decoded content itself is a key "parameter" of the field. The barcode values for Field #21 and #22 are different, which is a critical functional mismatch.

Summary of Discrepancies:

The output does not match the specification for most fields in terms of position (y-coordinate), font, and style. The consistent vertical shift suggests a global configuration issue.
